Video Cassette Recorder

Panasonic
Omnivision VHS

Summary

PV-1220

SPECIFICATIONS

Power Source: 120V AC $\pm 10\%$, 60Hz $\pm 0.5\%$
 Power Consumption: Approx. 18 watts
 Television System: EIA Standard (525 lines, 60 fields)
 NTSC color signal

Video Recording

System: 2 rotary heads, helical scanning system
 Luminance: FM azimuth recording
 Color signal: Converted subcarrier phase shift recording

Audio Track: 1 track

Tape Format: Tape width 1/2" (12.7mm), high density tape

Tape Speed: SP mode: 1-5/16 i.p.s. (33.35mm/s)
 LP mode: 21/32 i.p.s. (16.67mm/s)
 SLP mode: 7/16 i.p.s. (11.12mm/s)

Record/Playback Time: 8 HRS. with 160 min. type tape used in SLP mode

FF/REW Time: Less than 6 min. with 120 min. type tape

Heads: Video: 2 rotary heads
 Audio/Control: 1 stationary head
 Erase: 1 full track erase
 1 audio track erase

Input Level: Video: VIDEO IN Jack (RCA type)
 1.0Vp-p, 75 Ω unbalanced
 Audio: AUDIO IN Jack (RCA type)
 -20dB, 50k Ω unbalanced

TV Tuners: VHF Input: VHF Ch2-Ch13,
 75 Ω unbalanced
 UHF Input: Ch14-Ch83,
 300 Ω balanced

Output Level: Video: VIDEO OUT Jack (RCA type)
 1.0Vp-p, 75 Ω unbalanced
 Audio: AUDIO OUT Jack (RCA type)
 -6dB, 600 Ω unbalanced

RF Modulated: Ch3/Ch4 switchable,
 72dB μ , (Open Voltage)
 75 Ω unbalanced

Video Horizontal

Resolution: Color: more than 230 lines
 B/W: more than 230 lines

Audio Frequency

Response: SP mode: 100Hz ~ 8kHz
 (10dB down) LP mode: 100Hz ~ 6kHz
 SLP mode: 150Hz ~ 5kHz

Signal-to-Noise Ratio: Video: SP mode: better than 41 dB
 LP mode: better than 41 dB
 SLP mode: better than 41 dB
 (Rohde & Schwarz noise meter)
 Audio: SP mode: better than 42 dB
 LP mode: better than 40 dB
 SLP mode: better than 40 dB

Operation

Temperature: 41°F—104°F (5°C—40°C)
 Operating Humidity: 10%—75%
 Weight: 13.0 lbs. (5.9kg)
 Dimensions: 16-15/16" (W) \times 11-5/8" (D) \times 4-1/4" (H)
 (430mm \times 295mm \times 108mm)

Accessories Supplied: • Remote control unit
 • VHF connecting cable
 • 300 Ω —75 Ω transformer
 • Twin-lead cable

Available Tapes: 1/2" VHS video cassette tapes
 NV-T160 Approx. 1073 ft. (327m), 160,
 320, or 480 min
 NV-T120 Approx. 810 ft. (247m), 120, 240,
 or 360 min
 NV-T60 Approx. 417 ft. (127m), 60, 120,
 or 180 min.

Weight and dimensions shown are approximate. Specifications are subject to change without notice.

INTRODUCTION

This Service Manual contains information which will allow the service technician to understand and service the Panasonic VHS recorder Models PV-1230, PV-1222, PV-1225 and the various accessories that complement the deck.

For a detailed technical explanation, please refer to the Training Manual on these models.

Some of the Features incorporated in these models are: soft touch controls, 12 position Electronic Tuner; 2 week/1 program Timer, Wired Remote Control (PV-1230: 5F, PV-1222/PV-1225: 1F), One Touch Record Button (O.T.R), Picture Search in SP, LP and SLP, STILL Picture in SLP, Light Editing, Auto Rewind, Frame Advance in SLP, SLOW Picture in SLP.

These 3 models use a multi-function display indicator which combines indicators for time, tape counter, speed, transport functions, and timer record into one easy to read digital display.

The above features plus the VHS format make the PV-1230/PV-1222/PV-1225 table top VCR's an excellent unit for your enjoyment.

Just slightly ahead of our time...Panasonic

DESCRIPTION OF CONTROLS	1-4
UHF AND CABLE CONNECTIONS	1-7
GLOSSARY OF TERMS	1-10

SAFETY PRECAUTIONS

GENERAL GUIDELINES

1. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
2. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
3. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

LEAKAGE CURRENT COLD CHECK

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between $1\text{M}\Omega$ and $5.2\text{M}\Omega$. When the exposed metal does not have a return path to the chassis, the reading must be ∞ .

LEAKAGE CURRENT HOT CHECK (See figure 1.)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a $1.5\text{k}\Omega$, 10 watts resistor, in parallel with a $0.15\mu\text{F}$ capacitor, between each exposed metallic part on the set and a good earth ground such as a water pipe, as shown in figure 1.
3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 volts RMS. A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed 1/2 milliamp. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

Figure 1

ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device).

"NOTE to CATV system installer:

This reminder is provided to call the CATV system installer's attention to Article 820-22 of the NEC that provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as practical".

FEATURES

Your Panasonic VCR has these special features to enhance your viewing enjoyment.

Watch one channel while recording another

Fine-editing

Cable-ready

(Only PV-1230)

Multi-motion playback

- Fast Search
- Still picture
- Frame Advance
- Slow-motion

Remote Control

Unattended (Timer) Recording

Up to Eight-hour recording

Extended Time One Touch Recording (240 MIN)

► PV-1230/PV-1222/PV-1225 Comparison Chart

FEATURES	PV-1230	PV-1222	PV-1225
STILL	SLP

This symbol warns the user that uninsulated voltage within the unit may have sufficient magnitude to cause electric shock. Therefore, it is dangerous to make any kind of contact with any inside part of this unit.

This symbol alerts the user that important literature concerning the operation and maintenance of this unit has been included. Therefore, it should be read carefully in order to avoid any problems.

DESCRIPTION OF CONTROLS

TOP and FRONT

• RESET BUTTON

Pushing this button causes the Tape Counter to return to "0000". By beginning the recording at "0000", subsequent playback will be more convenient.

• TIMER BUTTON

This button is used to put the VCR in Unattended Recording mode after programming functions have been completed. When this button is ON, "TR" appears on the Multi Function Display, and you will not be able to operate the unit manually.

• CHANNEL SELECTOR BUTTONS/INDICATOR LIGHTS

Select the channel (2~83, A~W, A-2, A-1) you wish to view or record by pushing any one of these 12 buttons.

• CASSETTE HOLDER

• PUSH BUTTON CONTROLS (See next page.)

• MULTI FUNCTION DISPLAY (See next page.)

• CHANNEL NUMBER HOLDER

Pull it out for changing channel tabs.

• UHF/VHF/CATV TUNING CONTROLS (INNER DOOR)

Used to adjust each channel position for desired channel.

• TAPE-SPEED SELECTOR (SP/LP/SLP)

Set this selector for the desired tape speed of a recording.

• SLOW TRACKING CONTROL

If the slow-motion or still picture contains bands of noise, this control may require adjustment.

• TRACKING CONTROL

Use this control during regular playback if the image is partially obscured by bands of noise.

• TIMER CONTROLS

Used to set the Timer to make an Unattended Recording when you are away from home, busy or asleep.

• AUTOMATIC FINE TUNING (AFT) SWITCH (INNER DOOR)

Under normal conditions, turn the AFT Switch "ON".

• ONE TOUCH RECORD (O.T.R.) BUTTON (INNER DOOR)

One Touch Recording enables you to do impromptu recordings at any time. Just select the channel and push the ONE TOUCH RECORD Button for 30 minutes to 4 hours of recording.

PUSH BUTTON CONTROLS

• REWIND/SEARCH ◀◀ BUTTON

Push this button to rewind tapes. "REW" and "◀" appear on the Multi Function Display. During the playback mode, holding this button down will allow you to view the picture in reverse rapidly. "◀" flashes.

• EJECT BUTTON

Push this button to insert or remove the cassette. "■" flashes on the Multi Function Display while the tape is being ejected.

• POWER BUTTON

This button is used to turn the VCR on and off. When this button is pushed, counter appears on the Multi Function Display.

• VCR/TV SELECTOR

VCR: To monitor video recordings or to view playback.

TV: To watch TV or to view another program while recording a different program.

When this is set to VCR, "VCR" appears on the Multi Function Display.

• PAUSE/STILL BUTTON

Push this button to temporarily stop the tape movement in either the recording or playback mode. During playback a still picture is produced when the pause is used. Push again to release pause. When this button is pushed, "PLAY" and "■" appear on the Multi Function Display.

• PLAY BUTTON

Push this button to play back recorded tapes. "PLAY" and "▶" appear on the Multi Function Display.

• FAST FORWARD/SEARCH ▶▶ BUTTON

Push this button to move the tape forward rapidly. "FF" and "▶" appear on the Multi Function Display. During the playback mode, holding this button down will allow you to view the picture in the forward direction rapidly. "▶" flashes.

• RECORD BUTTON

Recording is started by pushing this button and the PLAY Button at the same time. "REC" and "▶" appear on the Multi Function Display.

• SLOW BUTTON

While viewing a still picture, push this button to advance the picture one frame at a time. "▶" flashes. During the playback mode, pushing this button will allow you to view a slow-motion picture. "SLOW" appears on the Multi Function Display.

• STOP BUTTON

Push this button to stop the tape. "■" appears on the Multi Function Display.

MULTI FUNCTION DISPLAY

• DIGITAL CLOCK

Normally, the present time is displayed.

• TAPE COUNTER

Tape counter number is displayed.

• SPEED INDICATOR "SP" "LP" "SLP"

This shows the tape speed during recording and playback.

• VCR/TV INDICATOR "VCR"

This indicator appears when the VCR/TV Selector is set to VCR.

• FUNCTION INDICATOR "■■■■"

This shows the mode of VCR (EJECT, PLAY, REC, REW, FF, PAUSE, STILL, SEARCH, STOP, FRAME ADVANCE, SLOW).

• DEW INDICATOR "DEW"

This indicator appears if excessive moisture condenses in the unit. If the DEW Indicator is ON, the unit will not operate. If this happens, leave the VCR ON and let it remain at room temperature until this indicator goes off.

• TIMER INDICATOR "■"

When TIMER Button is set to ON, this indicator appears and you will not be able to operate the unit manually.

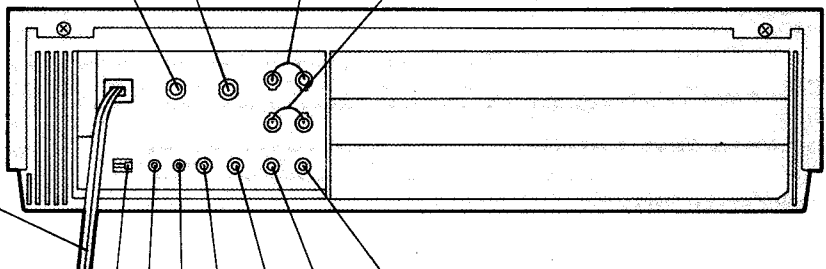

• O.T.R. INDICATOR "OTR"

When OTR is set, this indicator appears.

• CASSETTE-IN INDICATOR "■"

This indicator shows the condition of the cassette tape in the unit.

REAR

- **VHF ANTENNA OUTPUT TERMINAL (TO TV SET)**
Connect this terminal to the VHF antenna terminal on the TV.
 - **VHF ANTENNA INPUT TERMINAL (FROM ANTENNA)**
Connect the VHF antenna to this terminal.
 - **UHF ANTENNA OUTPUT TERMINALS (TO TV SET)**
Connect these terminals to the UHF antenna terminals on the TV.
 - **UHF ANTENNA INPUT TERMINALS (FROM ANTENNA)**
Connect the UHF antenna to these terminals.
 - **AC POWER CORD**
Connect to a 120 V 60 Hz AC outlet.
 - **AUDIO INPUT CONNECTOR**
For connection to a portable video camera or another VCR.
 - **VIDEO INPUT CONNECTOR**
For connection to another VCR or a portable video camera.
 - **AUDIO OUTPUT CONNECTOR**
For connection to a monitor TV, another VCR or an audio tape recorder.
 - **VIDEO OUTPUT CONNECTOR**
For connection to a monitor TV or another VCR.
 - **CAMERA REMOTE JACK**
For connection to the Remote Pause Jack of the optional camera.
 - **REMOTE JACK**
For connection to the Wired Remote Control.
 - **RF CONVERTER CHANNEL SELECTOR**
Set to channel 3 or 4, whichever is not used in your area.
- 
- The diagram shows the rear panel of a television set. On the left side, there is a power cord inlet and several antenna terminals. On the right side, there are multiple input and output connectors for audio and video, as well as remote control jacks and a channel selector. Lines connect the text labels to the corresponding physical ports on the device.

In some cases, the product may differ slightly from illustrations or photographs.
Please be assured that this difference is not due to mistake but to ongoing product improvement.

UHF AND CABLE CONNECTIONS

If you receive UHF TV broadcasts, connect TV antennas to the VCR and TV as shown below.

UHF CONNECTION

① Indoor or outdoor UHF antenna

- Remove the UHF antenna twin lead wires from the back of your TV, and attach these wires to the UHF IN terminals of the VCR.

②

- Attach the Twin Lead (flat) Cable (supplied) to the UHF OUT terminals of the VCR.
- Attach the other end to the UHF terminals of the TV.

If you receive only UHF Channels, you must also add one of the following two connections ③ or ④ between your VCR and TV. This connection is necessary to view tapes in playback and to use your TV as a monitor.

- If you have only screw type VHF terminals on your TV, use connection ③. If using connection ③, set the switch of the VHF Connecting Cable to lower (300 Ω) position.
- If you have a VHF terminal on your TV, use connection ④. If using connection ④, set the switch of the VHF Connecting Cable to upper (75 Ω) position.

- Attach the VHF Connecting Cable (supplied) to the VHF OUT terminal of the VCR.
- Attach the other end of the cable to the VHF terminal of the TV (connection ③) or the VHF antenna terminals of the TV (connection ④).

CABLE-VCR-TV (FOR CATV/PAY CHANNELS RECORDING/PLAYBACK)

The unit has an extended range, and can tune the Mid-Band and Super-Band cable channels. (Channels A~W, A-2, A-1). Also, the unit can tune to any of the 70 UHF channels (14-83). Refer to VCR FINE TUNING.

BASIC HOOK-UP

However, if you subscribe to a special channel which is scrambled-you probably have a descrambler box for proper reception. The Unit by itself cannot properly receive a scrambled program since it does not contain a descrambler. In order for the Unit to properly receive a scrambled program, your existing descrambler must be used. There are two commonly used methods of connection in this case.

TYPICAL CABLE SYSTEM HOOK-UPS WITH CABLE CONVERTER/DESCRAMBLER BOXES

The above cable hook-up allows VCR-TV functions except for viewing one channel while recording another.

The above cable hook-up allows VCR-TV functions, including viewing one channel while recording another, but if requires two cable TV Converter Boxes and one Switch Box.

Since the PV-1230 has an extended range of tuning, tuning-programming of non-scrambled Mid-Band and Super-Band TV programs is possible. When a cable converter or descrambler box is connected to the unit, all Unattended Recording functions will continue to operate with the exception of changing channels automatically. Channel selection will have to be performed with the cable converter. Unattended Recording is therefore limited to one channel at any given time.

GLOSSARY OF TERMS

ACC

Automatic Color Control used to maintain an overall constant color signal level in the color circuits.

ACK

Automatic Color Killer.

Adjacent Track

This is the name of the video track to the immediate left or right of the track of concern.

AFC

Automatic Frequency Control used to phase-lock the color circuits to either the recording or playback color signal, in order to achieve a stable color signal.

AFT

Automatic Fine Tuning...This is a special circuit found in most recent TV sets which makes the local oscillator of the TV tuner follow the channel of concern in order to produce a stable IF frequency. In other words, if for any reason the TV station being received changes frequency, the AFT circuit will automatically compensate so that no interference will be seen on the screen, i.e., no manual fine tuning is necessary.

AGC

Automatic Gain Control used to maintain an overall constant picture level in the luminance circuits.

APC

Automatic Phase Control used to help phase lock the color circuits to either the recording or playback color signal in order to achieve a stable color signal.

Azimuth

A term used to describe the left to right tilt of the gap of a recording head, if it could be viewed straight on.

Balanced Modulator

A circuit so designed to give as an output the frequency sum or frequency difference of its two input signals. Any special characteristics of one of the input signals will be present in the output signal.

Beats

A term used to describe the unwanted signals produced when two original signals are allowed to be mixed together.

Bipolar PG

Pulse Generator signals that have both positive and negative excursions.

Burst

A short time occurrence (8 to 10 cycles) of the 3.58MHz subcarrier signal, appearing right after horizontal sync but centered on the blanking portion of the video waveform. Burst is used to keep the color oscillator of a TV receiver locked to the broadcast station.

B/W

Abbreviation for Black and White.

C

Capacitor.

C Signal

The color portion of a video signal.

Capstan

A small rotating metal dowel which drives the recording tape to assure positive tape movement.

Chroma

The color portion of a video signal.

Chrominance

The color portion of a video signal.

Clamp

The process of giving an AC signal a specific DC level.

Control Signal

A special signal recorded onto the video tape which is used during playback as a reference for the servo circuits.

Converted Subcarrier

This is the process of frequency shifting the color 3.58MHz subcarrier and its sidebands down to 629kHz.

Crosstalk

The name given to the unwanted signals obtained when a video head picks up information from an adjacent track.

CUE

To scan the playback picture at a faster than normal speed in the Forward direction.

D

Diode.

DL

Delay Line.

Dark Clip

After emphasis, the negative going spikes (undershoot) of a video signal may be too large in amplitude for safe FM modulation. A dark clip circuit is used to cut off these spikes at an adjustable level.

DDC

Direct Drive Cylinder...as used in VHS, this means that the video heads are driven by a self-contained brushless DC motor using no belts or gears. DD cylinders produce pictures with better stability.

Delta Factor (Δf)

A term used to indicate that a playback signal off the video tape has some jitter or "wow and flutter". Δf , or "a change in frequency" means that the color signal off the tape is not a stable frequency of 629kHz, but rather a signal whose frequency at any instant is some small amount above or below 629kHz.

Deviation

A term used to describe how far the FM carrier swings when it is modulated. In VHS the upper limit is 4.4MHz.

Dew Detector

A variable resistor whose resistance value depends upon the ambient humidity.

Dihedral

A term used to describe the relative position between the two video heads as they are mounted in the head cylinder. Perfect dihedral means that the tips of the heads are exactly 180° apart.

Dropout

A momentary absence of FM or color signal off the tape, whether due to uneven oxide or a coating of dust on the tape or video heads.

Duty Cycle

In describing a rectangular waveform, the "duty" refers to the percentage of off time and on time for one complete cycle. 50—50 means that there are equal periods of off time and on time for one cycle and this would be a square wave.

E-E

Electronics to Electronics...this is the picture viewed on the TV set when a recording is being made. This picture goes through some but not all of the circuits of the recorder and is used to test the operation of said circuits.

EQ

Shortened form of "Equalization", used in the audio circuits.

Emphasis

The process of boosting the level of the high frequency portions of the video signal.

FG

Frequency Generator used in the servo circuits.

FL

Filter.

FM Signal

The luminance portion of the video signal is used to control the frequency of astable multivibrator. The output of this multivibrator is a frequency modulated (FM) signal shifting from 3.4MHz to 4.4MHz (plus sidebands).

Field

One half of a television picture. A field consists of 262.5 horizontal scanning lines across the picture tube. Two fields are necessary to complete a fully scanned TV picture (frame). First, one field is "sprayed" on the picture tube, starting at the top of the tube with Line 1, and ending at the bottom with Line 262.5. Then, the next field begins at the top of the tube again with Line 262.5 and ends at the bottom with Line 525. The lines of the second field lie in-between the lines of the first field. This property of falling in-between lines is called "interlacing". The two sweeps of the picture tube, or two fields make up one complete TV picture of "frame". Frame repetition is 30Hz, therefore field repetition is 60Hz.

Flagwaving

This is the term used to describe a TV sets ability to accept unstable playback pictures from a video tape recorder. All home VTR's have some degree of playback instability. A TV set with a long horizontal AFC time constant may not recover from the VTR's instability before the active picture is being scanned. This can cause a bending or flapping from side to side of the top inch or so of the screen. This movement is called "flagwaving".

Frame

One complete TV picture. See "Field".

Gate

A circuit which will deliver an output only when a specific combination of its inputs are present. For use in analog or digital applications.

Guard Band

This is the space between video tracks on the video tape in the SP mode. Guard bands contain no information.

Hall Effect IC

An external magnetic field causes current to flow in this type of device.

HD

Horizontal Drive signal.

Head Cylinder

A cylindrical piece of metal which houses the video heads. The tips of the heads protrude slightly from the surface of the cylinder so that they may scan the tape as the cylinder spins.

Head Switching

The action of turning off during playback, the video head which is not in contact with the video tape. A particular video head will be turned off 30 times per second. This is done so that the head which is not scanning the tape, and therefore not delivering a good signal, cannot contribute any noise to the playback signal.

Head Switching Pulse

The signal which is applied to the Head Amplifier to perform head switching. This is a square wave at 30Hz, with a 50—50 duty cycle.

Helical

A word used to describe a general type of VTR in which the tape wraps around the video head cylinder in the shape of a 3-dimensional spiral, or "helix". The video tracks are recorded as a series of slanted lines.

IC

Integrated Circuit.

Interchangeability

A term used to describe how well a particular VTR will play back a tape recorded on another VTR of the same type. Good interchangeability indicates good playback.

Interlacing

The property of the scan lines of two television fields to lie in-between each other. See "Field".

Interleaving

A term used to indicate that the harmonics of the chrominance signal lie in-between the harmonics of the luminance portion of the video signal as it is viewed on a spectrum analyzer. This means that the color information of a video signal does not interfere with, although it is broadcast at the same time as, the luminance information.

Also, signals which have this interleaving property are not readily seen on a TV screen, because of their virtual cancellation characteristics.

Interleaving signals (fi) must have the following frequency relationship:

$$f_i = \left(\frac{2n+1}{2} \right) \times f_H \quad (n = 0, 1, 2, 3, 4, \dots)$$

$$f_H = 15,734 \text{ Hz (H sync frequency)}$$

Jitter

The name of the effect on the playback picture if a VTR has too much "wow and flutter". The picture appears to have a rapid shaking movement.

L

Coil.

Luminance

This is the portion of video signal which contains the sync and B/W information.

MMV

Monostable Multi-Vibrator...Usually an IC device which gives a logic high or low output with a variable duration upon receipt of an input pulse or transition.

Non-Linear Emphasis

This is similar to regular emphasis with the difference that small level high frequency portions of the signal are given more of a boost than higher level high frequency portions.

NTSC

The National Television Systems Committee. These four letters identify the United States color television standard.

O.T.R.

One Touch Recording (O.T.R.) enables you to do impromptu timer recordings at any time. When you have to go out for urgent matters or you are going to sleep, this function is very useful. Just select the channel and push the O.T.R. Button for 30 minutes to 2 hours of recordings. After recording, the VCR will be turned off automatically.

PG

Pulse Generator used in the servo circuits.

Q

A term used to describe the graphic response of a filter or tuned amplifier.

R

Resistor.

Review

To scan the playback picture at a faster than normal speed in the Reverse direction.

RF

Radio Frequencies.

Rotary Chroma

The name of the process used in VHS to change the phase of the chrominance signal at a rate of 15,734 (same as H sync frequency) times per second.

Rotary Transformer

A device used to magnetically couple RF signals to and from the spinning video heads, thus eliminating the need for brushes.

Sample and Hold

A process used in comparator circuits by which the value of a particular signal is measured at a specific moment in time...then this value is stored for later use.

Search

To scan the playback picture at a faster than normal speed in either the forward or reverse direction.

Servo

Short for Servo mechanism. This is an electro-mechanical device whose mechanical operation (for instance motor speed) constantly being measured and regulated so that it closely matches or follows an external reference.

Skew

Another way of saying Tension Error. Skew is actually the change of size or shape of the video tracks on the tape from the time of recording to the time of playback. This can occur as a result of poor tension regulation by the VTR, or by ambient conditions which affect the tape.

Subcarrier

The name of the 3.58MHz continuous wave signal used to carry color information.

SS

Slow and Still.

T

Transformer.

TP

Test Point.

TR

Transistor.

Tension Error

See "Skew".

Time Base Stability

A term used to describe how closely the playback video signal from a VTR matches an external reference video signal...in regard to sync timing rather than picture content.

Tracking

This is the action of the spinning video heads during playback when they accurately track across the video RF information laid down during recording. Good tracking indicates that the heads are positioning themselves correctly, and are picking up a strong RF signal. Poor tracking indicates that the heads are off track, and picking up low level RF signal or noise.

VCO

Voltage Controlled Oscillator...An oscillator whose frequency of oscillation is governed by an external voltage.

Video Head

This is the electro-magnet used to develop magnetic flux which will put RF information on the tape. In VHS, two video heads are mounted in a rotating cylinder around which the video tape is wrapped. As the cylinder spins, each video head is allowed to alternately scan the tape.

Video Track

The name of the RF information laid down during recording, as a particular video head scans across the tape.

VHS

Video Home System.

VTR

Video Tape Recorder.

VV

Video to Video...or...the actual playback picture produced from a tape during playback.

VXO

Voltage Controlled Crystal Oscillator...Similar to VCO except that a quartz crystal is used as a reference which can be varied.

White Clip

After emphasis, the positive going spikes (overshoot) of the video signal may be too large for safe FM modulation. A white clip circuit is used to cut off these spikes at an adjustable level.

XTAL

Abbreviation for crystal.

Y Signal

The B/W portion of a video signal containing B/W information and sync.

Service Manual

Vol. 2

Video Cassette Recorder

Panasonic
 Omnivision **VHS**

Mechanical Adjustment Procedures

Electrical Adjustment Procedures

SPECIFICATIONS

Power Source: 120 V AC $\pm 10\%$, 60 Hz $\pm 0.5\%$
 Power Consumption: Approx. 21 watts
 Television System: EIA Standard (525 lines, 60 fields)
 NTSC color signal

Video Recording

System: 2 rotary heads, helical scanning system
 Luminance: FM azimuth recording
 Color signal: Converted subcarrier phase shift recording

Audio Track: 1 track

Tape Format: Tape width 1/2" (12.7 mm), high density tape

Tape Speed: SP mode: 1-5/16 i.p.s. (33.35 mm/s)
 LP mode: 21/32 i.p.s. (16.67 mm/s)
 SLP mode: 7/16 i.p.s. (11.12 mm/s)

Record/Playback Time: 8 HRS. with 160 min. type tape used in SLP mode

FF/REW Time: Less than 6 min. with 120 min. type tape

Heads: Video: 2 rotary heads
 Audio/Control: 1 stationary head
 Erase: 1 full track erase
 1 audio track erase

Input Level: Video: VIDEO IN Jack (RCA type)
 1.0 Vp-p, 75 Ω unbalanced
 Audio: AUDIO IN Jack (RCA type)
 -20 dB, 100 k Ω unbalanced

TV Tuners: VHF Input: VHF Ch2-Ch13,
 75 Ω unbalanced
 UHF Input: Ch14-Ch83,
 300 Ω balanced

Output Level: Video: VIDEO OUT Jack (RCA type)
 1.0 Vp-p, 75 Ω unbalanced
 Audio: AUDIO OUT Jack (RCA type)
 -6 dB, 600 Ω unbalanced

RF Modulated: Ch3/Ch4 switchable,
 72 dB μ , (Open Voltage)
 75 Ω unbalanced

Video Horizontal

Resolution: Color: more than 230 lines
 B/W: more than 230 lines

Audio Frequency

Response: SP mode: 100 Hz ~ 8 kHz
 (10 dB down) LP mode: 100 Hz ~ 6 kHz
 SLP mode: 150 Hz ~ 5 kHz

Signal-to-Noise Ratio: Video: SP mode: better than 40 dB
 LP mode: better than 40 dB
 SLP mode: better than 40 dB
 (Rohde & Schwarz noise meter)
 Audio: SP mode: better than 42 dB
 LP mode: better than 40 dB
 SLP mode: better than 40 dB

Operation

Temperature: 41°F—104°F (5°C—40°C)

Operating Humidity: 10%—75%

Weight: 17.6 lbs. (8.0 kg)

Dimensions: 16-15/16" (W) \times 14-3/8" (D) \times 4-1/2" (H)
 (430 mm \times 365 mm \times 115 mm)

Accessories Supplied: • Remote control unit
 • VHF matching box 75 Ω —300 Ω transformer
 • 300 Ω —75 Ω transformer
 • Coaxial cable with one-touch type F Connector
 • Twin-lead cable

Available Tapes:

1/2" VHS video cassette tapes
 NV-T160 Approx. 1073 ft. (327 m), 160,
 320, or 480 min
 NV-T120 Approx. 810 ft. (247 m), 120, 240,
 or 360 min
 NV-T60 Approx. 417 ft. (127 m), 60, 120,
 or 180 min.

Weight and dimensions shown are approximate. Specifications are subject to change without notice.

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are shaded on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

MECHANICAL ADJUSTMENT PROCEDURES

DISASSEMBLY OF CABINET PARTS

1. DISASSEMBLY FLOWCHART

This flowchart indicates disassembly steps of the cabinet parts and the Bottom PC Boards in order to find the item(s) necessary for servicing. When reassembling, perform the step(s) in the reverse order. Bottom Plate can be removed separate.

Notes:

1. When removing the front panel, work with care so as not to break the locking portions of the panel.
2. Adjustments are required when the Cassette Guide and Cassette Up Unit are replaced.

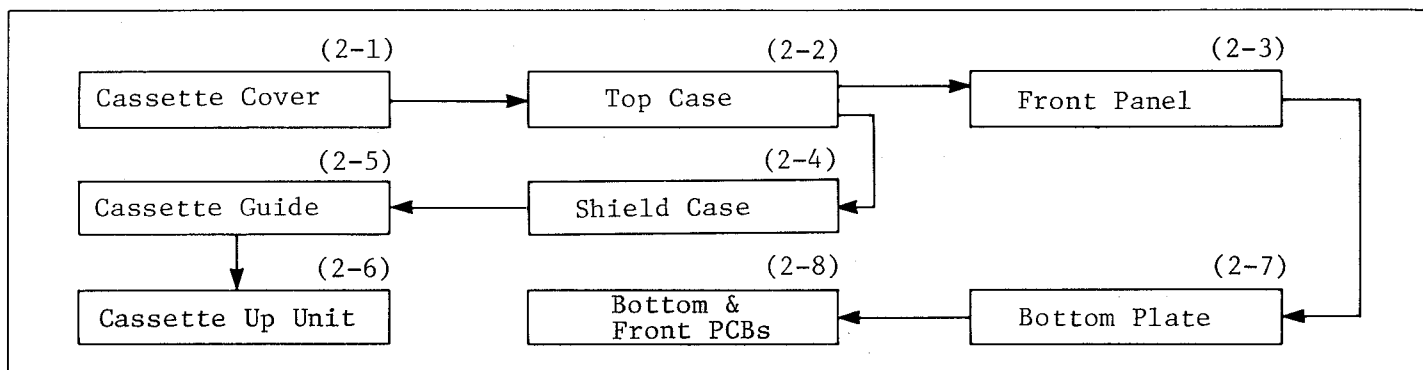

Fig. M1 Disassembly Flow Chart

2. DETAILED DISASSEMBLY METHOD

2-1. Removal of the Cassette Cover

Press the eject button to raise the cassette up unit, remove 2 screws (A) and move the cassette cover upwards to unlock the locking tabs. Then remove the cassette cover.

Fig. M2 Removal of Cassette Cover

2-2. Removal of the Top Case

Lower the cassette up unit, remove 2 screws (B). Then pull the top case towards the back and then carefully lift the front portion to remove.

Fig. M3 Removal of Top Case

2-3. Removal of the Front Panel

Release 3 locking tabs. Then hold both right and left top portions of the panel and turn it towards the front of deck to remove.

Fig. M4 Removal of Front Panel

2-4. Removal of the Shield Case

Remove 4 screws (C) and carefully lift the Shield Case.

Fig. M5 Removal of Shield Case

2-5. Removal of the Cassette Guide

Remove 2 screws (D) and the Cassette Guide.

Fig. M6 Removal of Cassette Guide

Note:

When the cassette guide only is removed, it should be reinstalled after the cassette up unit is installed because an adjustment is required. When reinstalling, insert the cassette tape and ensure that the clearance between cassette and projections on the cassette guide is more than 1 mm.

2-6. Removal of the Cassette Up Unit

Raise the cassette up holder, remove 2 screws (E) on each side.

Fig. M7 Removal of Cassette Up Holder

Note:

An adjustment is required when re-installing. Refer to "ADJUSTMENT OF CASSETTE UP UNIT" section.

2-7. Removal of the Bottom Plate

Place the deck so that the left side faces down, hold the deck with your hand and remove 6 screws (F).

Fig. M8 Removal of Bottom Plate

2-8. Opening of the Bottom & Front PC Boards

Place the deck so that the left side faces down, hold the deck with your hand and remove 2 red screws (G).

Fig. M9 Opening of Bottom & Front PCBs-(1)

Next release the 6 locking tabs of front P.C. Boards.

Fig. M10 Opening of Bottom & Front PCBs-(2)

Then open the Bottom & Front P.C. Boards.

PROCEDURE FOR CLEANING OF UPPER CYLINDER UNIT

1. Position the video head to permit access for cleaning and hold the upper cylinder to keep it from turning while cleaning.
2. Gently rub the video head in direction of tape travel with Head Cleaning Stick (VFK27) moistened with freon solvent.
3. Repeat for the other video head.

Fig. M11 Head Cleaning

Notes:

1. Do not rub vertically.
2. Do not apply any pressure to head. If contaminant is not easily removed, continued gentle wiping will usually remove the substance.

ADJUSTMENT PROCEDURES

1. REPLACEMENT OF UPPER CYLINDER UNIT

Work with extreme care when removing or replacing the upper cylinder unit. Do not touch video heads during servicing.

1. Unsolder the 4 wires which are color coded to matching wires on the head relay board.
2. Remove the 2 screws and gently lift the upper cylinder unit from the shaft.

Fig. M12 Replacement of Upper Cylinder Unit-(1)

3. Before reinstalling a new unit, clean the D.D. cylinder shaft and the surface that it engages on the upper cylinder with a soft cloth dampened with freon liquid.

Fig. M13 Replacement of Upper Cylinder Unit -(2)

4. Install new unit according to the color code of the head relay board. Tighten the 2 screws and resolder the 4 wires to the head relay board.

Note:

Upon completion of replacement, confirm performance. And if required, perform "TAPE INTERCHANGEABILITY ADJUSTMENT".

2. REPLACEMENT OF D.D. CYLINDER UNIT

Work with extreme care when removing or replacing the D.D. cylinder unit. Do not touch video heads during servicing.

1. Remove the screw and shield case.
2. Disconnect 2 connectors (P2001 and P3001) from the D.D. cylinder unit.
3. Remove screw (A) and discharge angle.
4. Remove the D.D. cylinder unit by removing 3 screws (B).

Fig. M14 Replacement of D.D. Cylinder Unit -(1)

Note:

Since there is very little clearance between D.D. cylinder unit and chassis, remove the D.D. cylinder unit gently and carefully.

5. Remove the upper cylinder unit from the D.D. cylinder and reinstall it on new one. To perform this step, refer to "REPLACEMENT OF UPPER CYLINDER UNIT" section.
6. Reinstall the new D.D. cylinder unit, restore the wires and connect 2 connectors, (P3001 and P2001).

Notes:

1. When reinstalling the New D.D. Cylinder Unit, fit the New D.D. Cylinder Unit to the chassis by turning it counterclockwise.

Fig. M15 Replacement of D.D. Cylinder Unit-(2)

2. Upon completion of replacement, confirm performance. If any further maintenance is required, perform "TAPE INTERCHANGEABILITY ADJUSTMENT".

3. CONFIRMATION OF DISCHARGE ANGLE UNIT INSTALLATION POSITION

Check to see if the discharge angle unit is correctly set in a position within 1 mm to the UP side from the center of the cylinder shaft as show in Fig. M16.

Note:

Never install the discharge angle unit to any position to the down side from the center of the cylinder shaft, but always within a maximum of 1 mm to the UP side of the center of this shaft.

Fig. M16 Confirmation of Discharge Angle Unit Position

4. POSITION ADJUSTMENT OF CASSETTE GUIDE PIN

This adjustment is required only when the cassette guide pin has been replaced or it's mounting screw has been loosened.

* Equipment Required:

Guide Pin Fixture (VFKS0006)

1. Remove the Cassette Cover, Top Case, Cassette Up Unit and the Shield Case.
2. Move the Pressure Roller back with your finger and slightly loosen screw (A).

Fig. M17 Adj. of Cassette Guide Pin-(1)

3. Install the guide pin fixture and move it so that the capstan shaft fits snugly in the notch of the fixture and adjust the guide pin as shown below. Then tighten screw (A).

Fig. M18 Adj. of Cassette Guide Pin-(2)

5. POSITION ADJUSTMENT OF PRESSURE ROLLER

A: Specification: $1.2 \begin{smallmatrix} +0.3 \\ -0.5 \end{smallmatrix} \text{mm}$

1. Remove the Cassette Up Unit. Connect a jumper from Q6014 ⑧ to GND, push the Lock Lever down, push the safety switch, PLAY button and RECORD button to simulate the REC mode.

Fig. M19 Simulation of REC-PAUSE

2. Push the PAUSE button to simulate the REC-PAUSE mode.
3. Confirm that the clearance between the capstan shaft and pressure roller is within the specification.
4. If it is out of spec., adjust it by turning screw (A) to obtain the specified clearance.

Fig. M20 Spec. of Clearance

Note:

Upon completion of the adjustment, remove jumper.

B: Adjustment of Oil Seal

Specification: $0.8 \begin{smallmatrix} +0.1 \\ -0 \end{smallmatrix} \text{mm}$

Set the distance between the Capstan Holder Unit and Oil Seal to the specified clearance.

Fig. M21 Spec. of Clearance

6. CONFIRMATION OF TAPE SPEED

* Equipment Required:

Frequency Counter

VHS Alignment Tape, VFMS0001H6

1. Remove the Bottom Case, Cassette Cover, Top Case, Front Panel and Bottom & Front PCBs.

2. Connect the frequency counter to the output terminals of the capstan FG signal. (Connect one to TP2001 and the other to ground line.)

Fig. M22 Location of TP2001

3. Playback the monoscope portion of the alignment tape and wait until tape movement is well stabilized.
4. Read the frequency counter and confirm that it is within the specification.
5. If it is out of spec., use appropriate belt to obtain specified tape speed, note that 3 different capstan belts are available.

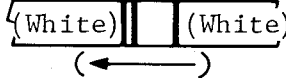

Part NO. of Belt	Mark on Belt (Rotating Direction)	Case of Use
VDVS0029A		Less than 1073.9 Hz
VDVS0029B		Within Spec. 1078.9±5Hz
VDVS0029C		More than 1083.9 Hz

Fig. M23 Indication on Belt

6. When replacing the Capstan Belt, first remove 2 screws (A), Thrust Holder, and the Fast Wind Belt. Then remove the Capstan Belt and install the appropriate belt.

Fig. M24 Replacement of Capstan Belt

Notes:

1. Do not put any oil or grease on the belts or pulleys.
2. When installing a new capstan belt, make sure the group of two, three or four stripes is positioned in the direction of rotation of capstan motor pulley in PLAY mode and on outside.

7. POSITION ADJUSTMENT OF TENSION POST

* Equipment Required:

Tension Post Adjustment Plate
..... (VFKS0002)
Fine Adjustment Screwdriver
..... (VFKS0021)

1. Remove the Cassette Cover, Top Case, Cassette Up Unit and the Bottom Plate. Then stand the deck so that the left side of deck faces down.
2. Connect a jumper from Q6014 ② to GND, push PLAY button to complete loading, then disconnect the AC plug. Then place the deck upright.
3. Place the adjustment plate, slightly loosen screw securing the tension band bracket.
4. Insert the fine adjustment screwdriver into the hole and move the tension band bracket right or left so the tension post just touches the fixture.
5. Remove jumper.

Note:

Make sure that the TC link does not move when performing this adjustment.

Fig. M25 Adj. of Tension Post

8. MEASUREMENT AND ADJUSTMENT OF BACK TENSION

A: Measurement Procedure

*** Equipment Required:**

Back Tension Meter (Tentelometer,
Model T2-H7-UM, Purchase Locally)
VHS Cassette Tape (120 Minute Tape)

*** Specification: 25 ~ 30g**

1. Remove the Cassette Cover, Top Case, Cassette Up Unit and the Shield Case.
2. Pull the erase head in the direction indicated by the arrow and hold it with adhesive tape.
3. Play back the cassette tape from its beginning and wait until tape motion has stabilized. (for approx. 10 to 20 seconds)
4. Insert tension meter in tape path and confirm reading.
5. If the reading is out of spec., repeat the adjustment procedure.

Fig. M26 Measurement of Back Tension

Notes:

1. Make sure that the three probes of the meter are all in solid contact with tape, but out of contact with any other parts while measuring.
2. It is recommended that measurements be taken three times as tension meter is very sensitive.

B: Adjustment Procedure

*** Equipment Required:**

Fine Adjustment Screwdriver.... (VFK0136)

1. Loosen screw (A) and insert the fine adjustment screwdriver into the hole (B).
2. Move the adjustment plate either right or left as indicated by the arrow to obtain the specified tension.
Turn the driver clockwise to loosen tension, counterclockwise to tighten it.
3. Tighten screw (A) and verify tension with the meter once again.
4. Reinstall the cabinet parts.

Fig. M27 Adj. of Back Tension

Note:

Upon completion of adjustment, remove the adhesive tape holding the erase head.

9. CONFIRMATION OF BRAKE TORQUE

A. Confirmation Procedure

* Equipment Required:

Dial Torque Gauge (VFK0133)

Adaptor for Gauge (VFK0134)

1. Connect a jumper from Q6014 ② to GND, push FF button. Then disconnect the AC plug.

Fig. M28 Spec. of Brake Torque

2. Attach the adaptor to the torque gauge.
3. Place the torque gauge on the reel table. The weight of gauge should not rest on the reel table.

Fig. M29 Measuring Method

4. Turn torque gauge in the direction indicated as A or B until the brake begins slipping. Read the torque when it begins slipping.

Note:

If proper brake torque can not be obtained, clean the rotating surface of reel table with a soft cloth and recheck torque before replacing brakes.

10. CONFIRMATION OF TAKEUP TORQUE

* Equipment Required:

Dial Torque Gauge (VFK0133)

Adaptor for Gauge (VFK0134)

* Specifications:

in PLAY mode 120 ~ 190g-cm

in FF and REWIND mode

..... More than 400g-cm

1. Attach the adaptor to the torque gauge.
2. Connect a jumper from Q6014 ② to GND, and TP2006 to TP6003, then Lower the cassette up unit (without cassette cover), and turn power switch on.
3. Set torque gauge to the Takeup Reel Table, push the play button and read torque on gauge. Also check torque on FF mode by pushing the FF button.

Note:

While measuring, the weight of gauge should not rest on the reel table.

4. Set torque gauge to the Supply Reel Table, press the rewind button for confirmation of the rewind mode.
5. Remove the jumpers and reinstall the cassette cover.

Note:

If the torque readings are off considerably, rollers or reel tables or drive belt may need replacement.

Fig. M30 Measuring Method

11. POSITION ADJUSTMENT OF SAFETY SWITCH

This adjustment is required only when the Safety Switch has been replaced or mounting screw has been loosened.

* Equipment Required:

Cassette Holder Fixture
..... (VFKS0004)
Fine Adjustment Screwdriver
..... (VFK0136)

1. Remove the Cassette Cover, Top Case, Cassette Up Unit and Front Panel.
2. Place the fixture in place over the reel tables, and slightly loosen screw (A).
3. Insert the adjustment screwdriver into hole (B). Turn screwdriver counter clockwise and then slowly turn clockwise until switch turns on (it clicks). Tighten screw (A).

Fig. M31 Adj. of Rec. Safety SW.

Fig. M32 Erase Tab on Cassette

Note:

Confirm that the Safety Switch correctly turns ON and OFF using video cassettes with and without the safety tab removed.

12. ADJUSTMENT OF CASSETTE UP UNIT

* Equipment Required:

Cassette Holder Fixture
..... (VFKS0004)

Note:

Before adjustment, ensure that the cassette lock lever is unlatched.

1. Remove the Cassette Guide and slightly loosen 4 screws (A). Keep the cassette up unit in eject position.
2. Insert the fixture and push all the way in until it touched the tabs on the cassette holder. Hold the fixture and cassette holder together with your hand, then slowly lower them while watching all holes and cut-outs until the cassette holder latches.
3. Press the center portion of the fixture down so as not to miss the adjusted position, then tighten 4 screws (A).
4. Supply power to ensure smooth movement by repeatedly pressing down and ejecting the cassette up unit.

Fig. M33 Adj. of Cassette Up Unit

5. Replace the Cassette Guide and adjust it properly.

13. HEIGHT ADJUSTMENT OF REEL TABLES

*** Equipment Required:**

Post Adjustment Plate (VFKS0010)
 Reel Table Height Fixture
 (VFKS0009)

*** Specification** $0 \pm 0.1\text{mm}$

1. Remove the Cassette Up Unit.
2. Place the post adjustment plate over the reels, and put the fixture on it. Set the fixture to zero "0" making sure that the scraper of fixture touches the cut-out portion of the plate.

Fig. M34 Adj. of Reel Table Height - (1)

3. Then measure the top portion of reel table and confirm the difference against the condition just performed in former step. Do same for the other reel table.

Fig. M35 Adj. of Reel Table Height - (2)

4. If the difference is more than 0.1mm (higher or lower), adjust the height of reel table to obtain the specified height.
5. For adjustment, change the poly slider washer located under the reel table. (The washer is available in sizes of varying thickness, $t=0.13\text{mm}$, 0.25mm and 0.5mm .)

14. HEIGHT ADJUSTMENT OF TAPE GUIDE POSTS

*** Equipment Required:**

Hex. Wrench, 0.9mm (VFK0146)
 Post Adjustment Plate ... (VFKS0010)
 Reel Table Height Fixture
 (VFKS0009)

Nut Driver (Purchase Locally)
 Post Adjustment Screwdriver
 (VFK0137)

1. Remove the cassette up unit and place the adjustment plate.

Fig. M36 Adj. of Tape Guide Post Height - (1)

2. First lower all posts so the condition of height becomes as shown. (Lower end of post and tape guide should be lower than scraper.) Loosen lock screw located at lower portion of posts (P2 & P3), then turn the posts with post adjustment screwdriver.

Fig. M37 Adj. of Tape Guide Post Height - (2)

- Place the fixture on the adjustment plate and fit the scraper to the post. The fit exactly scraper should as shown. (The scraper of the fixture should be fully lowered till it touches plate.)

Fig. M38 Adj. of Tape Guide Post Height - (3)

- Set the fixture to zero "0" and slowly raise the post until it just touches the scraper. For adjustment of P1 and P4, use the nut driver. (The post cap on P4 can be removed by turning counterclockwise.) For adjustment of P2 and P3, use the post adjustment screwdriver.

Note:

Upon completion of adjustment, tighten lock screws on the P2 and P3 and also install the post cap on post 4. When the post cap on P4 is reinstalled, the position of it should be as shown below when viewed from the direction indicated by the arrow.

Fig. M39 Installation of Post Cap

15. TAPE INTERCHANGEABILITY ADJUSTMENT

Note:

To perform these adjustment/confirmation procedures, make sure that the tracking control is set in the detent (fixed) position.

*** Equipment Required:**

Alignment Tape, (VFMS0001H6)

Post adjustment Screwdriver

..... (VFK0137)

H-Position Adjustment Screwdriver

..... (VFKS0003)

Hex. Wrench, 0.9mm .. (VFK0146)

Hex. Wrench, 1.5mm .. (VFK76)

Oscilloscope

Nut Driver

(Purchase from local supplier), 7.0mm

15-A. CONFIRMATION OF TAPE TRAVEL

To prevent the alignment tape from being damaged, use a normal cassette tape for confirmation.

- Playback a cassette tape and confirm that tape travels without curling at the edges.

Fig. M40 Location of Posts

2. If curling is apparent, adjust the height of posts by turning the top of post with the post adjustment screwdriver (for P2 & P3) or nut driver (for P1 & P4). Before turning the posts, slightly loosen the lock screws on them and upon completion, retighten them.

Fig. M41 Confirmation of Tape Travel

15-B. CONFIRMATION OF A/C HEAD HEIGHT

This confirmation is required when the A/C Head was replaced and for preliminary height adjustment. For final adjustments, perform item 15-C, this page.

1. Looking at the lower edge of the control head with the tape running, ensure that the lower edge of tape runs along the lower edge of the control head.
2. If it doesn't, slightly turn nut (A) in one of directions to correct it. Turn it clockwise to lower the head, counterclockwise to raise it.

Fig. 42 Confirmation of A/C Head Height

15-C. CONFIRMATION OF TILT OF A/C HEAD

This procedure should be performed after the height adjustment of P4.

1. Playback the tape and confirm that the tape runs between lower and top limiters of post. Also confirm that the tape is running smoothly.
2. If adjustment is required, turn clockwise until the screw (C) curling is apparent at lower edge of P4. Then turn the screw (C) counterclockwise until the curling is smoothed out.

Fig. M43 Confirmation of A/C Head Tilt

15-D. HEIGHT AND AZIMUTH ADJUSTMENT OF AC/HEAD

1. Connect the oscilloscope to the audio output jack on the rear of the deck.
2. Playback the monoscope portion (6kHz, Audio) of the alignment tape, VFMS0001H6.
3. Adjust the height by turning screw (B) indicated in Fig. M42 for the maximum output level. Slowly and gently turn screw (B) for this adjustment.

Fig. M44 Adj. of A/C Head Height

4. Readjust nut (A) for maximum output.

15-E. HORIZONTAL POSITION ADJUSTMENT OF A/C HEAD

1. Connect the oscilloscope to the Test Point, TP3014. Use TP2008 as a trigger.
2. Playback the monoscope portion of the alignment tape, VFMS0001H6 and confirm that RF envelope appears as in Fig. M47.
3. If adjustment is required, set the H-position screwdriver into the slot of the adjustment nut and rotate in either of right or left for the maximum envelope output.

Fig. M45 A/C Head H-Position Adj.

15-F. CONFIRMATION/ADJUSTMENT OF ENVELOPE OUTPUT

1. Connect the oscilloscope to the Test Point, TP3014. Use TP2008 as a trigger.

Fig. M46 Location of TP3014

2. Playback the monoscope portion of the alignment tape VFMS0001H6 and watching the scope display adjust the height of posts P2 and P3 by so the envelope figure becomes as flat as possible.
($V1/V_{max} \geq 0.7$, $V2/V_{max} \geq 0.8$)
If adjustment is required, turn top of post with post adjustment screwdriver. For adjustment of P2 & P3, refer to step 2 of item 15-A.

Fig. M47 Spec. of Envelope Figure - (1)

3. When the scope display is as follows, adjust the height of P2 so that the waveform looks like Fig. M50.

Fig. M48 Envelope Figure - (2)

- When the scope display is as follows, adjust the height of P3 so that the waveform looks like Fig. M50.

Fig. M49 Envelope Figure - (3)

- The scope display when P2 and P3 are adjusted correctly should appear as shown below.

Fig. M50 Envelope Figure - (4)

16. ADJUSTMENT OF V-STOPPERS

Equipment Required:
V-Stopper Adjustment
Fixture VFKS0029

- Remove the D.D. Cylinder Unit from chassis. (Removal of Upper Cylinder Unit is not required.) Refer to "REPLACEMENT OF D.D. CYLINDER UNIT" section.
- Keeping 4 screws (A) loose, set the fixture.
Push the V-stoppers snugly against the pins and tighten 4 screws (A).

Fig. M51 Adjustment of V-Stoppers

- Upon completion of the adjustment, simulate loading completion to ensure that posts smoothly fit the V-stoppers. Then reinstall the D.D. Cylinder Unit.

17. ADJUSTMENT OF CAM GEAR AND MODE SELECT SWITCH

General Condition:

The mechanism of this model is mostly engaged to the electrical circuit, System Control Circuit, through the mode select switch. Therefore the relation between the mode switch and the cam gear determines all further mechanical movement of the mechanical parts such as levers, gears, rollers and so on. If the adjustment of this item is performed improperly, the deck will be unloaded or automatically stopped. It will also result in damage to mechanical and electrical parts.

Note:

The Step 9 of this procedure describes the necessary adjustment if the mode select switch is replaced.

Adjustment Procedures:

1. Turn loading gear clockwise until post 2 and 3 are fully unloaded. The small projection on the loading gear will be pointing up in the unloaded condition.

Fig. M52 Adj. Procedure - (1)

2. Install the action gear so the hole on the action gear meets the projection on the loading gear. Ensure that the loading gear is still in the fully unloaded condition

3. Slowly slide the main rod so it's V-shaped mark meets the V-shaped mark of the mode select switch. This will simulate stop mode (unloading completion) of main rod and mode select switch.

Fig. M53 Adj. Procedure - (2)

4. Insert the cam gear so hole (A) on the gear meets the hole on the main rod. To facilitate matching the two holes, use the small hex. wrench or a metal pin. Also ensure that the two V-shaped marks are matched and that the simple slot side of the cam gear is showing.

Fig. M54 Adj. Procedure - (3)

5. Install the sector gear so the pin on the sector gear meets the inner slot of the cam gear (simple slot side). Also install retaining ring in order to mount sector gear.

Fig. M55 Adj. Procedure - (4)

6. Completed adjustments should appear as illustrated below, and the two V-shaped marks should be matched at the mode select switch.

Fig. M56 Adj. Procedure - (5)

7. Install the gear protector and tighten the nut for mounting action gear, and install the E-Ring to mount cam gear. Also install the large Pulley so that teeth it's contact the outer teeth of the intermediate gear. Then install a retaining ring to mount it.

Fig. M57 Adj. Procedure - (6)

8. Install the loading belt. Turn the large pulley in both directions to confirm smooth movement of this mechanism.

9. (Adjustment of Mode Select Switch)
Fix the main rod in the unloading completion condition, match the V-shaped notches of the switch and the tab on the main rod, then tighten 2 screws (C).
Upon completion, ensure that the movement of the deck is normal.

Fig. M58 Adj. of Mode select Sw.

18. CLEARANCE ADJUSTMENT OF EJECT SOLENOID

- * Equipment Required:
Fine Adjustment Screwdriver
..... (VFKS0021)
- * Specification 0.4 ± 0.1 mm

1. Remove the Cassette Compartment.
2. Remove 3 screws (A) and Eject Unit.

Fig. M59 Clearance Adjustment of Eject Solenoid-(1)

3. Slightly loosen 2 screws (B), and press the plunger all the way in with your finger.
4. Insert the adjustment screwdriver into hole and rotate it either right or left to obtain the specified clearance between the Eject Lever and Lock Lever

Fig. M60 Clearance Adjustment of Eject Solenoid-(2)

5. Then tighten 2 screws (B) and install the Eject Unit.

ELECTRICAL ADJUSTMENT PROCEDURES

This section provides complete electrical adjustment procedures which may be required for electronic circuits of 3 speed selectable video cassette recorder with CUE and REVIEW features.

Start Counter Reading	0 (0)	0020 \pm 8 (008 \pm 6)	0135 \pm 12 (060 \pm 6)	0240 \pm 20 (109 \pm 10)
Video	Blank	Monoscope	Color Bars	Multi-Burst
Audio	Blank	6kHz (MONO)	3kHz (STEREO)	1kHz (MONO)

Fig. E2

1. TEST EQUIPMENT

To perform the electrical adjustments completely, the following equipment is required.

1. DVM (Digital Volt Meter)
Voltage Range: 0.001 – 50V
2. Dual-trace Oscilloscope
Voltage Range: 0.005 – 50V/Div.
Frequency Range: DC – 10MHz
Probes: 10:1, 1:1
3. Frequency Counter
Frequency Range: 0 – 150MHz
4. Signal Generator
Sinewave: 0 – 10MHz
5. AC Millivolt Meter
Voltage Range: 0 – 3mVrms.
6. Tuning Amp.
7. VIF Sweep Generator/Trap Adjuster
8. Spectrum Analyzer
9. DC Power Supply Unit
Voltage: 0 – 15V DC
10. Variable Attenuator
Attenuate: ± 0 dB – -50dB
11. Monitor Scope
12. Color TV Receiver or Monitor
13. V-Hold ADJ. Tool
(VFKS0031)
14. Plastic Tip Driver and Non-Metal Driver
15. VHS Alignment Tape
(VFMS0001H6)

Fig. E1

2. ADJUSTMENT PROCEDURES

These adjustment procedures consist of the following sections.

1. Servo Section
2. Audio Section
3. Video Section
4. System Control Section
5. TV Demodulator Section

2-1. Servo Section

2-1-1. Head Switching Position Adjustment

Test Points: TP2008, TP3013

Adjustment : R2029 (PG SHIFTER)

1. Playback color bar section of the alignment tape.
2. Connect the scope CH1 to TP3013 on the Luminance section and CH2 to TP2008 on the Servo section. Set the scope to the CHOP mode.
3. Also set the scope to the Delay mode or expand the vertical interval of the signal from TP3013.
4. Adjust the PG SHIFTER (R2029) so that the head switching point is $6 \pm 1H$ before the start of vertical sync as shown below.

Fig. E4 TP3013 0.5V/0.1msec. div.
TP2008 5V/0.1msec. div.

2-1-2. Tracking FIX Adjustment

Test Points: TP2008, TP2010

Adjustment: R2028 (T. FIX)

1. Supply a video signal to the Video Input on the rear panel or tune in a local TV program.
2. Turn the Tracking Control on the front panel to the center detent point.
3. Insert a cassette and make a recording in the SP mode for a few minutes.
4. Playback the portion just recorded.
5. Connect the scope CH1 to TP2008 and CH2 to TP2010 on the Servo section.
6. Adjust the T. FIX (R2028) so that the T is $0.4 \pm 0.4msec$.

Fig. E5 TP2008 5V/0.2msec. div.
TP2010 5V/0.2msec. div.

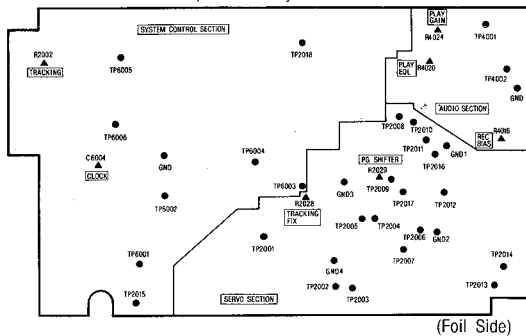

5. Change the slope selector on the scope from "+" to "-" and make sure that the other switching point is also $6H \pm 1H$ before the beginning of vertical sync.

2-2. Audio Section

Audio Section

Servo, Audio & System Control C.B.A.

(Foil Side)

Fig. E6

2-2-1. Bias Current Adjustment

Test Point: Audio Head Terminal

Adjustment: R4016 (BIAS ADJ)

1. Plug in a phono plug to the Audio Input on the rear panel, but do not supply the Audio signal.
2. Insert a cassette and make a recording in the SP mode.
3. Connect the AC Millivolt Meter as shown below.

Fig. E7

4. While the recording is taking place, adjust the BIAS ADJ (R4016) on the Audio section so that the voltage is $2.4 \pm 0.1\text{mVrms}$.

(Specification should be decided by the color of the dot on A/C Head.)

COLOR DOT	ADJUSTMENT VOLTAGE
NO COLOR DOT	$2.4 \pm 0.05\text{mVrms}$
YELLOW COLOR	$2.1 \pm 0.05\text{mVrms}$
GREEN COLOR	$2.7 \pm 0.05\text{mVrms}$

Audio/Control Head

Adjustment should be made depending on the color of the dot on the A/C head as above.

Fig. E8

5. Remove the AC Millivolt Meter.

Note:

For service replacement, A/C Head without colordot is supplied.

2-2-2. Playback Gain and Equalization Adjustment

Test Point: TP4001

Adjustments: R4024 (PB GAIN)

R4020 (PB EQL)

1. Supply a sinewave signal (1kHz and 5kHz, -30dB, 89mVp-p) to the Audio Input on the rear panel.
2. Supply the video signal to the Video Input on the rear panel.
3. Connect the AC Millivolt Meter to TP4001 on the Audio section.
4. Insert a cassette and make a recording 1kHz first then 5kHz signal in the SP mode.
Read the voltage of 1kHz.
5. Playback the portion just recorded.
6. Adjust PB GAIN (R4024) so that the voltage of playback is equal to that of recording.
7. Adjust the PB EQL (R4020) so that the 1kHz and 5kHz outputs are balanced.
8. Remove the AC Millivolt Meter.

2-3. Video Section

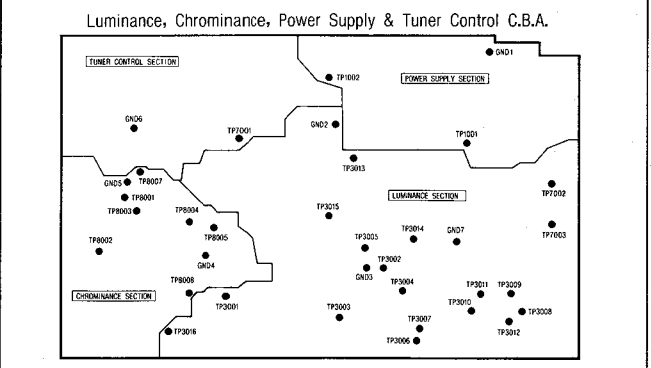

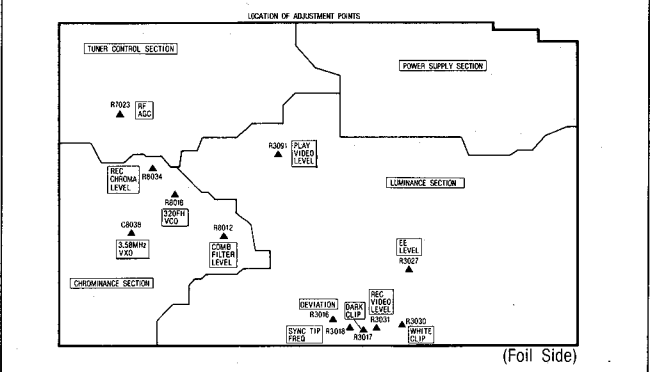

Fig. E9

2-3-1. E-E Level Adjustment

Test Point: TP3013

Adjustment: R3027 (E-E LEVEL)

1. Supply the video signal (1Vp-p) to the Video Input on the rear panel.
2. Connect the scope to TP3013 on the Luminance section.
3. Place the unit in STOP mode.
4. Adjust the E-E LEVEL (R3027) on the Luminance section so that the video level is $1.95 \pm 0.1\text{Vp-p}$.

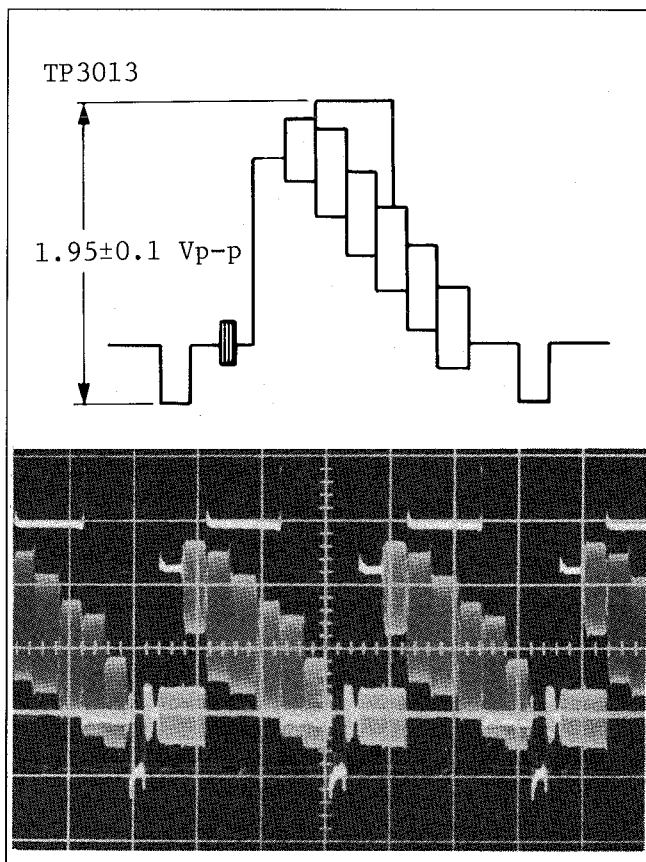

Fig. E10 TP3013 0.5V/20μsec. div.

2-3-2. Sync Tip Frequency and Deviation Adjustment

Test Point: TP3006

Adjustments: R3018 (SYNC TIP FREQ)

R3016 (DEVIATION)

1. Plug in a phono plug to the Video Input on the rear panel, but do not supply video signal.
2. Connect the frequency counter to TP3006 on the Luminance section.

3. Insert a cassette and place the unit in SP REC mode.
4. Adjust the SYNC TIP FREQ (R3018) so that the frequency is $3.4 \pm 0.04\text{MHz}$.
5. Remove the frequency counter.
6. Connect a $0.01\mu\text{F}$ capacitor between TP3006 and TP3012 on the Luminance section.
7. Connect a signal generator (sinewave) to TP3012 through a $1\text{k}\Omega$ resistor and a $0.01\mu\text{F}$ capacitor.

Fig. E11

8. Set the WHITE CLIP (R3030) and the DARK CLIP (R3017) to center position.
9. Supply a NTSC Color bar (100% White) signal to the Video Input on the rear panel.
10. Connect the 1000pF capacitor between junction of R3091 and L3021, and GND.

Fig. E12

11. Connect the scope to the junction of R3091 and L3021 on the Luminance section.
12. Set the frequency of the signal generator to $4.35\text{MHz} \pm 40\text{kHz}$.
13. Adjust the DEVIATION (R3016) for minimum carrier at peak white.
14. Remove the jumpers, resistors and capacitors.
15. Connect the scope to TP3013 on the Luminance section.
16. Insert a cassette and make a recording in the SP mode for a few minutes.

17. Playback the portion just recorded.
18. Confirm that the level of the video signal is $1.95 \pm 0.1\text{Vp-p}$.
19. Make White and Dark Clip adjustment.

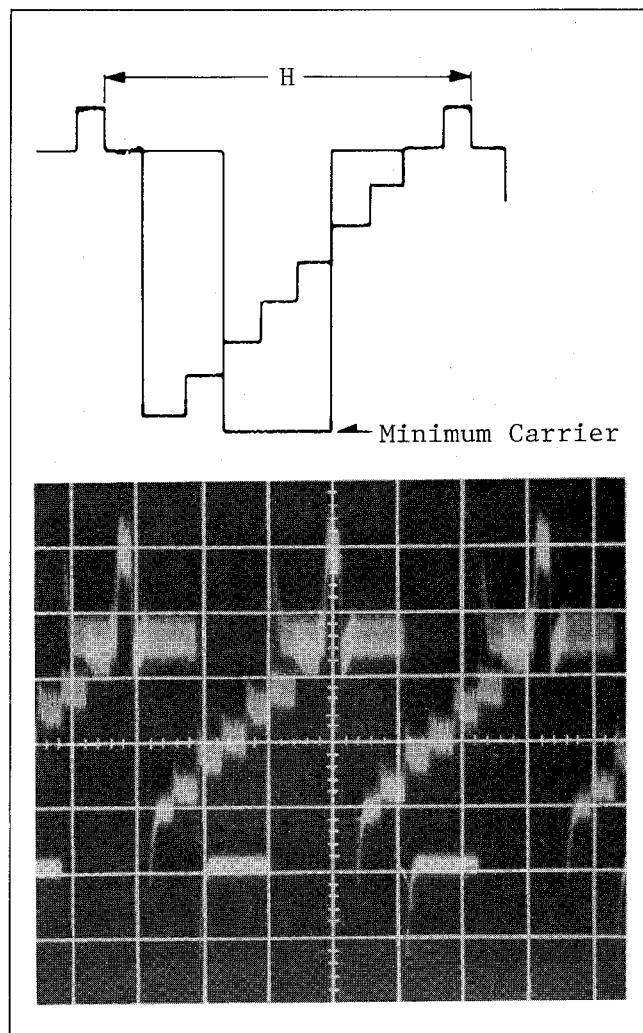

Fig. E13 20mV/20μsec. div.

2-3-3. White and Dark Clip Adjustment

Test Point: TP3003

Adjustments: R3017 (D CLIP)
R3030 (W CLIP)

1. Supply a color bar signal to the Video Input on the rear panel.
2. Connect the scope to TP3003 on the Luminance section.
3. Place the unit in SP RECORD mode.

- Adjust the WHITE CLIP ADJ (R3030) and the DARK CLIP ADJ (R3017) on the Luminance section so that the overshoot and undershoot are as shown below.

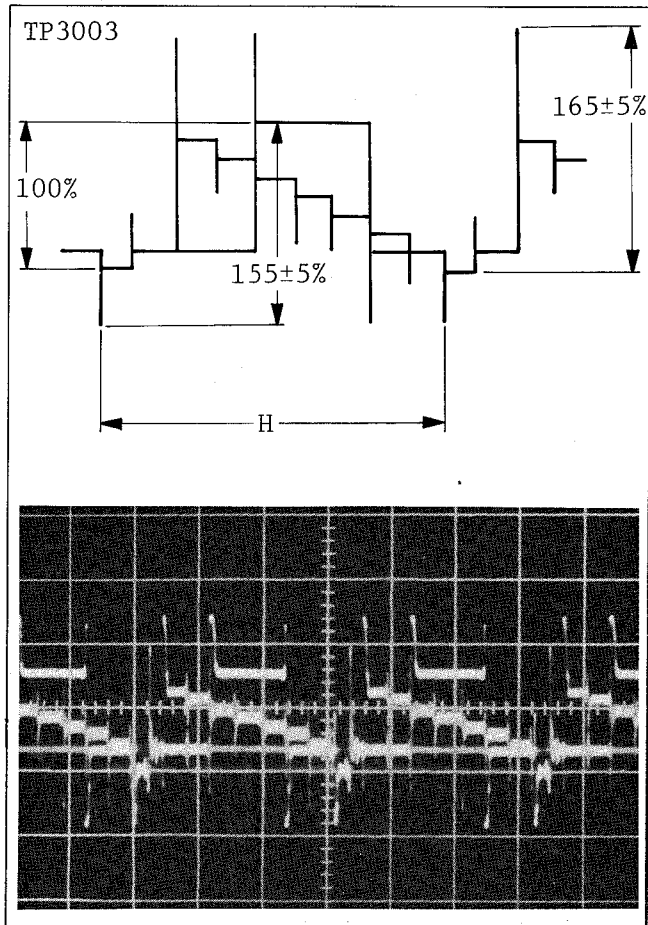

Fig. E14 TP3003 0.2V/20μsec. div.

2-3-4. Recording Current Adjustment

Test Points: TP3009, TP3008

Adjustments: R3031 (REC CURR)
R8034 (REC CHROMA)

- Supply a color bar signal to the Video Input on the rear panel.
- Insert a cassette and make a recording in the SP mode.
- Connect the scope between TP3009 (HOT) and TP3008 (GND) on the Luminance section. Use TP2008 as a trigger.
- Turn the REC CURR (R3031) fully clockwise from the foil side.
- Set the scope 20mV/div., 20μsec/div. Use Pin 22 of IC8001 as scope trigger.

- Adjust the REC CHROMA (R8034) on the Chrominance section so that the level of cyan portion is $36 \pm 3\text{mVp-p}$.

Fig. E15 TP3009 20mV/20μsec. div.

- Then set the scope 50mV-div., 2msec/div. Use TP2008 as scope trigger.
- Adjust the REC CURR (R3031) on the Luminance section so that the level of sync portion is $140 \pm 3\text{mVp-p}$.

Fig. E16 TP3009 50mV/2msec. div.

2-3-5. 320FH VCO Adjustment

Test Point: TP8001

Adjustment: R8018 (320FH VCO)

1. Plug in a phono plug to the Video Input on the rear panel, but do not supply the video signal.
2. Connect a jumper between TP8003 and TP8004.
3. Connect a jumper between base of transistor Q6014 and GND.
4. Connect a jumper between TP6003 and TP2006, and place the unit in the play mode without a tape.
5. Connect the frequency counter to TP8001 on the Chrominance section.
6. Adjust the 320FH VCO (R8018) on the Chrominance section so that the frequency is $4.2 \pm 0.5\text{MHz}$.
7. Remove the jumpers.

2-3-6. 3.58MHz VXO Adjustment

Test Point: TP8002

Adjustment: C8038 (3.58MHz VXO)

1. Plug in a phono plug to the Video Input on the rear panel, but do not supply the video signal.
2. Connect a jumper between base of transistor Q6014 and GND.
3. Connect a jumper between TP6003 and TP2006, and place the unit in the play mode without a tape.
4. Connect the frequency counter TP8002 on the Chrominance section.
5. Adjust the 3.58MHz VXO (C8038) from the component side so that the frequency at TP8002 is $3.579545\text{MHz} \pm 10\text{Hz}$.

2-3-7. Comb Filter Adjustment

Test Point: TP3013

Adjustment: R8012 (COMB ADJ)

1. Supply a color bar signal to the Video Input on the rear panel.
2. Insert a cassette and make a recording in the SLP mode.
3. Connect the scope to TP3013 on the Luminance section.

4. Playback the portion just recorded.
5. Turn the Tracking Control on the front panel for the poorest tracking. (Worst playback image.)
6. During playback, adjust the COMB ADJ (R8012) on the Chrominance section from the component side as shown below.

Fig. E17 TP3013 0.5V/20 μ sec. div.

2-3-8. Playback Level Adjustment

Test Point: TP3013

Adjustment: R3091 (VIDEO LEVEL)

1. Supply a color bar signal (1Vp-p) to the Video Input on the rear panel.
2. Insert a cassette and make a recording in the SP mode for a few minutes.
3. Connect the scope to TP3013 on the Luminance section.
4. Playback the portion just recorded.
5. During playback, adjust the VIDEO LEVEL (R3091) so that the video level is $2.0 \pm 0.1\text{Vp-p}$.
6. Confirm that the level of cyan portion is $1.2 \pm 0.2\text{Vp-p}$.

2-4. System Control Section

2-4-1. CLOCK Adjustment

Adjustment : C6004 (CLOCK)

1. Connect the frequency counter with 10:1 probe to TP6002 on the system control section.
2. Remove the jumper between TP6002 and junction of R6014 and R6012 on the foil side.
3. Adjust the CLOCK (C6004) from the component side so that the frequency at TP6002 is $349.525 \pm 0.001\text{KHz}$.
4. Remove the frequency counter.
5. Connect the TP6002 and the junction of R6014 and R6012 with the jumper.

2-5. TV Demodulator Section

The diagram illustrates the chassis layout of a television set, organized into four main functional sections:

- TUNER CONTROL SECTION:** Located in the upper left, this section includes components such as GN05, TP8007, TP8001, TP8003, TP8002, TP8004, TP8005, GA04, TP8006, TP3001, and TP3016.
- POWER SUPPLY SECTION:** Located in the upper right, it contains components like GN01, TP1002, GN02, TP3001, TP3013, and TP3015.
- CHROMINANCE SECTION:** Located in the lower left, it includes components like TP5002, TP8003, TP8004, TP8005, GA04, TP8006, TP3001, and TP3016.
- LUMINANCE SECTION:** Located in the lower right, it contains components like TP7002, TP7003, TP3025, TP3024, GN07, TP3002, TP3024, GN03, TP3024, TP3021, TP3009, TP3020, TP3007, TP3008, TP3005, TP3012, and TP3013.

2-5-1. VIF Overall Adjustment and VCO Adjustment

Test Points: TP704, TP703

Adjustments: T702 (VCO)

Tuner converter coil L23
(VIF Overall ADJ)

(CAUTION)

Since the TV Demodulator unit and UHF/VHF tuner unit have already been adjusted critically in factory, do not try to casually re-adjust them.

A: Factory Adjustment

A-1. VIF Overall Adjustment

1. Connect the VIF Sweep Generator, Trap Adjuster and Monitor Scope as shown below.

Monitor Scope VIF Sweep & Trap Adjuster

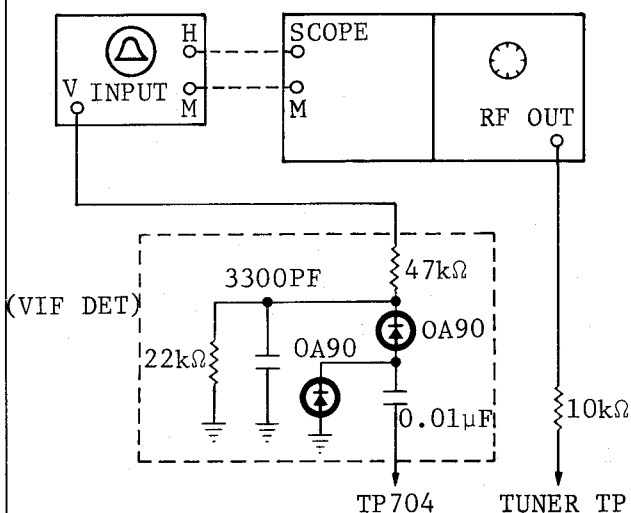

Fig. E22

2. Connect the output of the VIF Sweep Generator to tuner test point on the UHF/VHF tuner unit.
3. Connect the V Input of the Monitor Scope to TP704 on the TV Demodulator unit through VIF Detector.
4. Control to channel 13.
5. Connect the DC power supply unit to TP701 on the TV Demodulator unit.
6. Connect TP702 and GND with a 33μF/25V capacitor.
7. Adjust the VCO (T702) so that the beat portion is at center as shown below.

Fig. E23

8. Set the voltage on the TP701 so that the waveform level is maximum.
9. Adjust the output of the VIF Sweep Generator so that the A level is 1.0 Vp-p.

Fig. E24

10. Increase the VIF Sweep Generator output by 25dB.
11. Adjust the output of the DC Power Supply so that the A portion becomes 1.0Vp-p.
12. Adjust the tuner converter coil (L23) on the UHF/VHF tuner unit so that the sweep output waveform is as shown in Fig. E24.
13. Adjust the VCO (T702) so that the Beat portion is 45.75MHz marker as shown below.

Fig. E25

A-2. VCO Adjustment

1. Adjust the DC power supply output by 0V.
2. Connect a 33 μ F/25V capacitor between TP702 and GND.
3. Connect the Frequency Counter to TP703 on the TV Demodulator unit through a Tuning Amp.

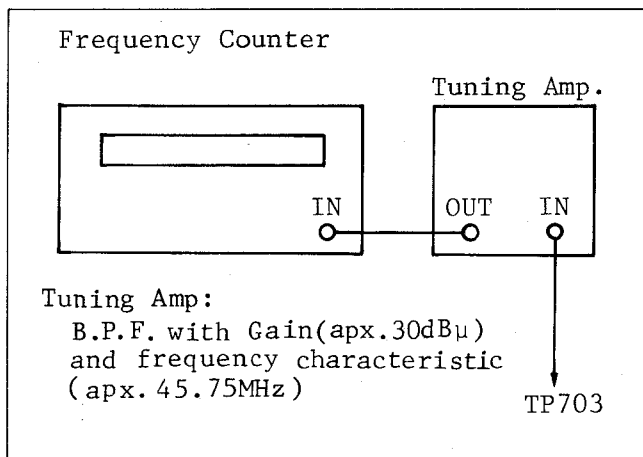

Fig. E26

4. Adjust the VCO (T702) so that the frequency is 45.75MHz \pm 10kHz.

B. Field Adjustment

1. Supply the NTSC standard color bar signal to the RF Input on the rear panel and tune this signal.
2. Connect the scope to TP704 on the TV Demodulator unit.
3. Adjust the VCO (T702) so that the waveform is as shown below.

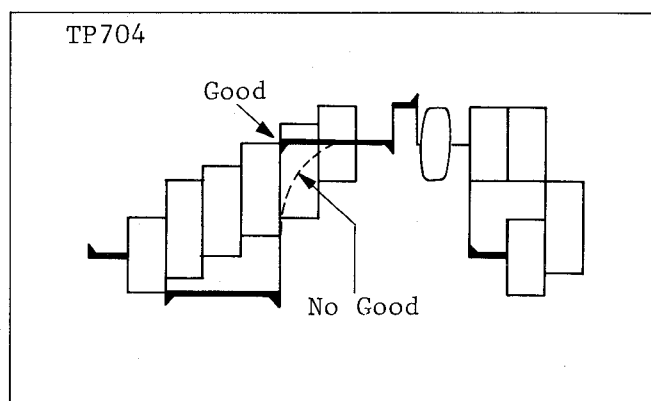

Fig. E27

4. Change the scope from TP704 to pin 6 of TV Demodulator unit.
5. Adjust the VIF Overall (Converter Coil L23) on the UHF/VHF tuner unit so that the burst level is 23 \pm 1% of video level.

Fig. E28 Pin 6 of TV Demodulator Unit
0.2V/20 μ sec. div.

2-5-2. AFT Trans Adjustment

Test Point: Tuner Test Point (TP)

Adjustment: T701 (AFT)

1. Tune in a local TV program on Channel 4.
2. Connect the frequency counter to tuner test point on the UHF/VHF tuner unit through a 10k Ω resistor.
3. Set the AFT switch on the front panel to "OFF".
4. Adjust the tuning VR on the front panel so that the frequency is 113.00 \pm 0.01MHz.
5. Set the AFT switch on the front panel to "ON".
6. Adjust the AFT (T701) so that the frequency is 113.00 \pm 0.005MHz.
7. Remove the frequency counter.

6. Then slowly turn the RF AGC (R7023) till just before the voltage drops.
7. Change the input electric field from 63dB μ to 66dB μ .
8. Confirm that the voltage at TP710 has dropped more than 1.0V.

2-5-3. Audio Level Adjustment

Test Point: Pin 15 of the TV Demodulator unit

Adjustment: R730 (AUDIO LEVEL)

1. Supply TV RF signal with audio modulation of 400Hz at 30% to the RF Input on the rear panel.
2. Connect the scope between pin 15 of the TV Demodulator unit and GND.
3. Adjust the AUDIO LEVEL (R730) so that the level is 133 +20, -30mVp-p.

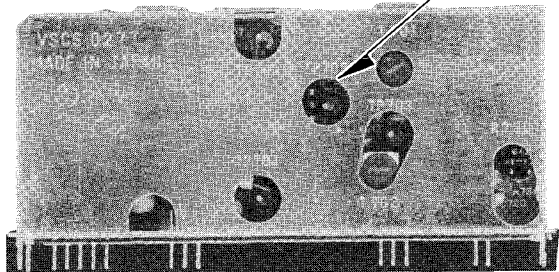

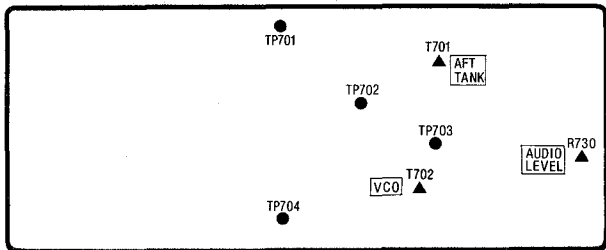

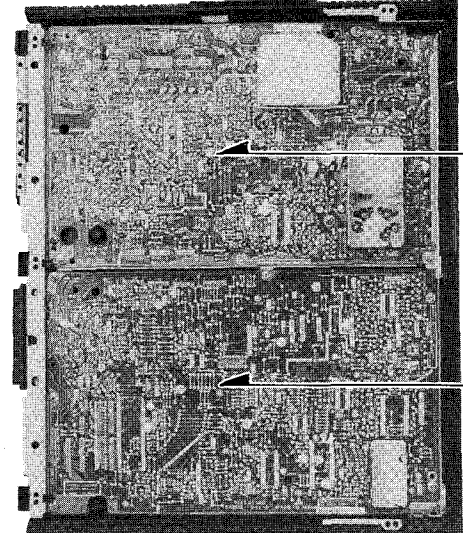

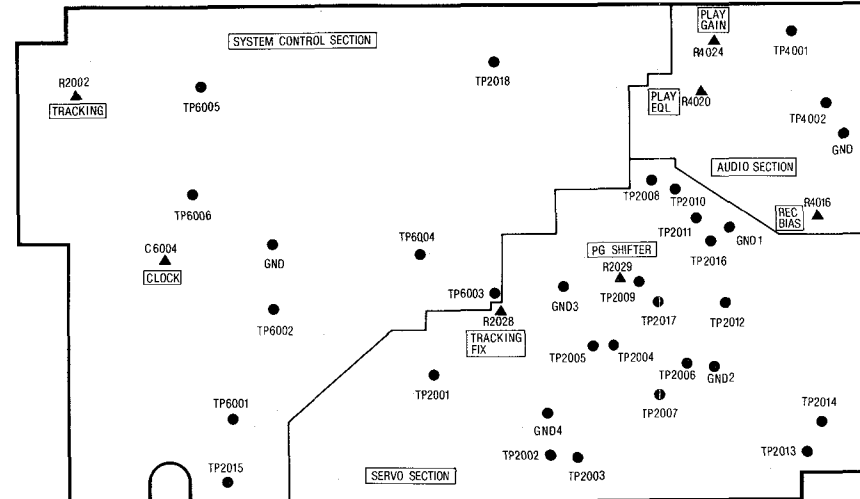

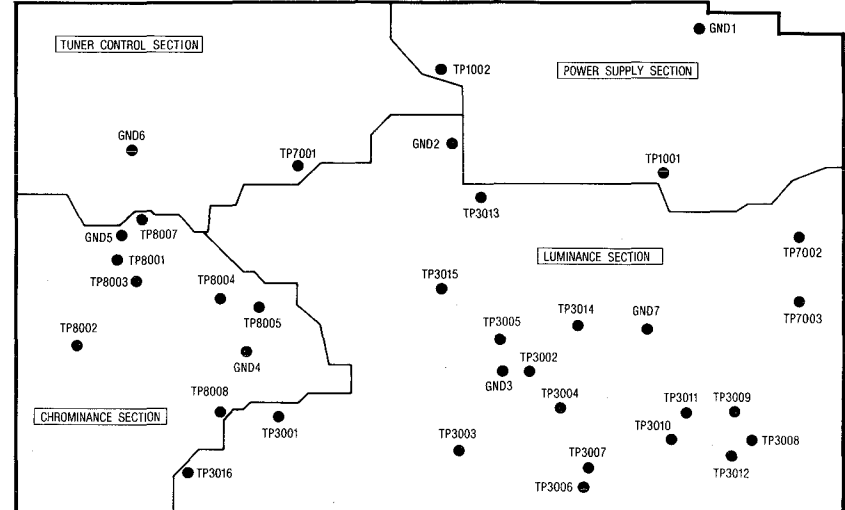

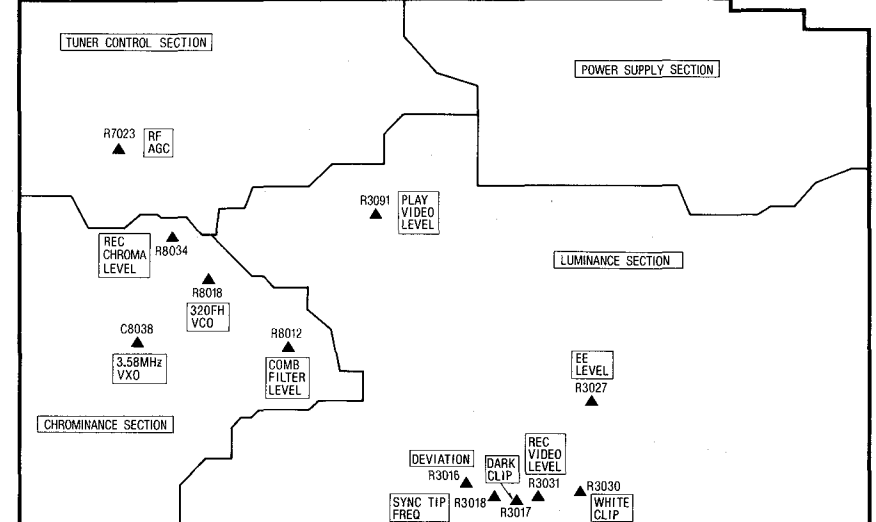

2-5-4. RF AGC Adjustment

Test Point: TP7001

Adjustment: R7023 (RF AGC)

1. Tune in a color bar signal (VHF).
2. Set the AFT switch to "ON" position.
3. Set the input level of electric field to 63dB μ .
(Using the Attenuator and Spectrum Analyzer)
4. Connect the scope to TP7001 on the tuner control section.
5. Turn the RF AGC(R7023) on the tuner control section fully clockwise from foil side.

Block Diagrams

SPECIFICATIONS

Power Source: 120V AC $\pm 10\%$, 60 Hz $\pm 0.5\%$
Power Consumption: Approx. 21 watts
Television System: EIA Standard (525 lines, 60 fields)
 NTSC color signal

Video Recording
 System: 2 rotary heads, helical scanning system
 Luminance: FM azimuth recording
 Color signal: Converted subcarrier phase shift recording

Audio Track: 1 track
Tape Format: Tape width 1/2" (12.7mm), high density tape
Tape Speed: SP mode: 1-5/16 i.p.s. (33.35 mm/s)
 LP mode: 21/32 i.p.s. (16.67 mm/s)
 SLP mode: 7/16 i.p.s. (11.12 mm/s)

Record/Playback Time: 8 HRS. with 160 min. type tape used in SLP mode
FF/REW Time: Less than 6 min. with 120 min. type tape
Heads: Video: 2 rotary heads
 Audio/Control: 1 stationary head
 Erase: 1 full track erase
 1 audio track erase

Input Level: Video: VIDEO IN Jack (RCA type)
 1.0Vp-p, 75 Ω unbalanced
 Audio: AUDIO IN Jack (RCA type)
 -20dB, 100k Ω unbalanced
TV Tuners: VHF Input: VHF Ch2-Ch13,
 75 Ω unbalanced
 UHF Input: Ch14-Ch83,
 300 Ω balanced

Output Level: Video: VIDEO OUT Jack (RCA type)
 1.0Vp-p, 75 Ω unbalanced
 Audio: AUDIO OUT Jack (RCA type)
 -6dB, 600 Ω unbalanced
RF Modulated: Ch3/Ch4 switchable,
 72dB μ , (Open Voltage)
 75 Ω unbalanced

Video Horizontal

Resolution: Color: more than 230 lines
 B/W: more than 230 lines

Audio Frequency

Response: SP mode: 100Hz ~ 8kHz
 (10dB down) LP mode: 100Hz ~ 6kHz
 SLP mode: 150Hz ~ 5kHz

Signal-to-Noise Ratio: Video: SP mode: better than 40dB
 LP mode: better than 40dB
 SLP mode: better than 40dB
 (Rohde & Schwarz noise meter)
 Audio: SP mode: better than 42dB
 LP mode: better than 40dB
 SLP mode: better than 40dB

Operation

Temperature: 41°F—104°F (5°C—40°C)
Operating Humidity: 10%—75%
Weight: 17.6 lbs. (8.0kg)
Dimensions: 16-15/16"(W) \times 14-3/8"(D) \times 4-1/2"(H)
 (430mm \times 365mm \times 115mm)

Accessories Supplied:

- Remote control unit
- VHF matching box 75 Ω —300 Ω transformer
- 300 Ω —75 Ω transformer
- Coaxial cable with one-touch type F Connector
- Twin-lead cable

Available Tapes:

1/2" VHS video cassette tapes
 NV-T160 Approx. 1073ft. (327m), 160,
 320, or 480 min
 NV-T120 Approx. 810ft. (247m), 120, 240,
 or 360 min
 NV-T60 Approx. 417ft. (127m), 60, 120,
 or 180 min.

Weight and dimensions shown are approximate. Specifications are subject to change without notice.

The diagram is a detailed schematic of a video recording and playback system. It features a central processing area with various functional blocks including AGC, LPF, Emitter Follower, CLAMP, PLAY AMP, REC AMP, NON LINEAR EMPHASIS DE-EMPHASIS, AMP, SYNC IN, SYNC SEPARATOR, MIX AMP, VV AMP, EE AMP, HPF, LIMITER, C3096, R3121, C3002, Q3002, SYNC TIP FREQ, D3001, HEAD SWI SIGNAL, D3010, C3054, C3055, L8001, L8002, C8034, Q8006, L8004, L8005, C8018, C8019, REC CHROMA LEVEL, L8006, C8021, TRAP, BURST GATE PULSE GENERATOR, 1/320, 1/2, 1/4 RING COUNTER, 0°, 90°, 180°, 270°, PHASE ROTATION, PHASE ROTATION, FREQUENCY DETECTOR, DIG P, and HEAD SWITCH PULSE. The system is powered by a +5V supply and includes a 3.58MHz VCO. The diagram also shows an EDGE NOISE CANCELLER section with LPF, AMP, Q3014, R3091, C3080, C3081, C3082, Q3016, D3007, D3008, and Q3015. The output section includes an FM DEMODULATOR, LIMITER, MIX, and another LIMITER. The diagram is annotated with numerous test points (TP) and waveforms, including TP3001 STOP, TP3002 SP, REC, TP3003 SP, REC, TP3004 SP, LP, SLP, REC, TP3005 LP, SLP, REC, TP3006 SP, REC, TP3007 SP, REC, TP3008 SP, LP, SLP, PLAY, TP3009 SP, LP, SLP, REC, TP3010 SP, LP, SLP, REC, TP3011 SP, LP, SLP, REC, TP3012 SP, LP, SLP, REC, TP3013 SP, LP, SLP, REC, TP3014 SP, LP, SLP, REC, TP3015 SP, LP, SLP, SPECIFICATIONS

Power Source: 120V AC $\pm 10\%$, 60 Hz $\pm 0.5\%$
 Power Consumption: Approx. 21 watts
 Television System: EIA Standard (525 lines, 60 fields)
 NTSC color signal

Video Recording

System: 2 rotary heads, helical scanning system
 Luminance: FM azimuth recording
 Color signal: Converted subcarrier phase shift recording

Audio Track: 1 track

Tape Format: Tape width 1/2" (12.7 mm), high density tape

Tape Speed: SP mode: 1-5/16 i.p.s. (33.35 mm/s)
 LP mode: 21/32 i.p.s. (16.67 mm/s)
 SLP mode: 7/16 i.p.s. (11.12 mm/s)

Record/Playback Time: 8 HRS. with 160 min. type tape used in SLP mode

FF/REW Time: Less than 6 min. with 120 min. type tape

Heads: Video: 2 rotary heads
 Audio/Control: 1 stationary head
 Erase: 1 full track erase
 1 audio track erase

Input Level: Video: VIDEO IN Jack (RCA type)
 1.0Vp-p, 75 Ω unbalanced

Audio: AUDIO IN Jack (RCA type)
 -20dB, 100k Ω unbalanced

TV Tuners: VHF Input: VHF Ch2-Ch13,
 75 Ω unbalanced
 UHF Input: Ch14-Ch83,
 300 Ω balanced

Output Level: Video: VIDEO OUT Jack (RCA type)
 1.0Vp-p, 75 Ω unbalanced

Audio: AUDIO OUT Jack (RCA type)
 -6dB, 600 Ω unbalanced

RF Modulated: Ch3/Ch4 switchable,
 72dB μ , (Open Voltage)
 75 Ω unbalanced

Video Horizontal

Resolution: Color: more than 230 lines
 B/W: more than 230 lines

Audio Frequency

Response: SP mode: 100 Hz ~ 8 kHz
 (10dB down) LP mode: 100 Hz ~ 6 kHz
 SLP mode: 150 Hz ~ 5 kHz

Signal-to-Noise Ratio: Video: SP mode: better than 40dB
 LP mode: better than 40dB
 SLP mode: better than 40dB
 (Rohde & Schwarz noise meter)
 Audio: SP mode: better than 42dB
 LP mode: better than 40dB
 SLP mode: better than 40dB

Operation

Temperature: 41°F—104°F (5°C—40°C)

Operating Humidity: 10%—75%

Weight: 17.6 lbs. (8.0 kg)

Dimensions: 16-15/16" (W) \times 14-3/8" (D) \times 4-1/2" (H)
 (430 mm \times 365 mm \times 115 mm)

Accessories Supplied:

- Remote control unit
- VHF matching box 75 Ω —300 Ω transformer
- 300 Ω —75 Ω transformer
- Coaxial cable with one-touch type F Connector
- Twin-lead cable

Available Tapes:

1/2" VHS video cassette tapes
 NV-T160 Approx. 1073 ft. (327 m), 160,
 320, or 480 min
 NV-T120 Approx. 810 ft. (247 m), 120, 240,
 or 360 min
 NV-T60 Approx. 417 ft. (127 m), 60, 120,
 or 180 min.

Weight and dimensions shown are approximate. Specifications are subject to change without notice.

Operating Humidity: 10%—75%

Weight: 17.6 lbs. (8.0 kg)

Dimensions: 16-15/16" (W) \times 14-3/8" (D) \times 4-1/2" (H)
 (430 mm \times 365 mm \times 115 mm)

Accessories Supplied: • Remote control unit
 • VHF matching box 75 Ω —300 Ω transformer
 • 300 Ω —75 Ω transformer
 • Coaxial cable with one-touch type F Connector
 • Twin-lead cable

Available Tapes: 1/2" VHS video cassette tapes
 NV-T160 Approx. 1073 ft. (327 m), 160, 320, or 480 min
 NV-T120 Approx. 810 ft. (247 m), 120, 240, or 360 min
 NV-T60 Approx. 417 ft. (127 m), 60, 120, or 180 min.

Weight and dimensions shown are approximate. Specifications are subject to change without notice.

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are shaded on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

Exploded Views Replacement Parts List

SPECIFICATIONS

Power Source: 120 V AC $\pm 10\%$, 60 Hz $\pm 0.5\%$
Power Consumption: Approx. 21 watts
Television System: EIA Standard (525 lines, 60 fields)
 NTSC color signal
Video Recording
 System: 2 rotary heads, helical scanning system
 Luminance: FM azimuth recording
 Color signal: Converted subcarrier phase shift recording
Audio Track: 1 track
Tape Format: Tape width 1/2" (12.7 mm), high density tape
Tape Speed: SP mode: 1-5/16 i.p.s. (33.35 mm/s)
 LP mode: 21/32 i.p.s. (16.67 mm/s)
 SLP mode: 7/16 i.p.s. (11.12 mm/s)
Record/Playback Time: 8 HRS. with 160 min. type tape used in SLP mode
FF/REW Time: Less than 6 min. with 120 min. type tape
Heads: Video: 2 rotary heads
 Audio/Control: 1 stationary head
 Erase: 1 full track erase
 1 audio track erase
Input Level: Video: VIDEO IN Jack (RCA type)
 1.0 Vp-p, 75 Ω unbalanced
 Audio: AUDIO IN Jack (RCA type)
 -20 dB, 100 k Ω unbalanced
 TV Tuners: VHF Input: VHF Ch2-Ch13,
 75 Ω unbalanced
 UHF Input: Ch14-Ch83,
 300 Ω balanced
Output Level: Video: VIDEO OUT Jack (RCA type)
 1.0 Vp-p, 75 Ω unbalanced
 Audio: AUDIO OUT Jack (RCA type)
 -6 dB, 600 Ω unbalanced
 RF Modulated: Ch3/Ch4 switchable,
 72 dB μ , (Open Voltage)
 75 Ω unbalanced

Video Horizontal

Resolution: Color: more than 230 lines
 B/W: more than 230 lines

Audio Frequency

Response: SP mode: 100 Hz ~ 8 kHz
 (10 dB down) LP mode: 100 Hz ~ 6 kHz
 SLP mode: 150 Hz ~ 5 kHz

Signal-to-Noise Ratio: Video: SP mode: better than 40 dB
 LP mode: better than 40 dB
 SLP mode: better than 40 dB
 (Rohde & Schwarz noise meter)
 Audio: SP mode: better than 42 dB
 LP mode: better than 40 dB
 SLP mode: better than 40 dB

Operation

Temperature: 41°F—104°F (5°C—40°C)
Operating Humidity: 10%—75%
Weight: 17.6 lbs. (8.0 kg)
Dimensions: 16-15/16" (W) \times 14-3/8" (D) \times 4-1/2" (H)
 (430 mm \times 365 mm \times 115 mm)

Accessories Supplied:

- Remote control unit
- VHF matching box 75 Ω —300 Ω transformer
- 300 Ω —75 Ω transformer
- Coaxial cable with one-touch type F Connector
- Twin-lead cable

Available Tapes:

1/2" VHS video cassette tapes
 NV-T160 Approx. 1073 ft. (327 m), 160,
 320, or 480 min
 NV-T120 Approx. 810 ft. (247 m), 120, 240,
 or 360 min
 NV-T60 Approx. 417 ft. (127 m), 60, 120,
 or 180 min.

Weight and dimensions shown are approximate. Specifications are subject to change without notice.

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are shaded on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

Service Manual

VHS Video Cassette Recorder

PV-1220

Supplementary

Subject: NEW SERVO, AUDIO &
SYSTEM CONTROL CIRCUIT

Since the SERVO, AUDIO & SYSTEM CONTROL Circuit Board has been redesigned, use this supplementary service manual when servicing the unit with this board.

1. Contents

1-1 Tentative Modifications.

A. Circuit Board Diagram.

These modifications are effective from Serial NO. D3MA81716 to F3SA22000.

1-2 Final Modifications.

A. Schematic Diagram.

B. Circuit Board Diagram.

C. Electrical Replacement Parts List.

These modifications are effective from Serial NO. F3SA60001.

2. Note

Please insert this Supplementary Service Manual PV-1220 into the original binder (VRD-8303-369).

SERVO, AUDIO & SYSTEM CONTROL CIRCUIT VOLTAGE CHART (FINAL).....	4
ELECTRICAL REPLACEMENT PARTS LIST (FINAL)	5
(SERVO, AUDIO & SYSTEM CONTROL C.B.A.)	

Note: Tentative Modifications.....

The modifications to the diagram of the Servo, Audio, System Control C.B.A. resulted in the inclusion of Sub System Control (I) and (II) into the Servo, Audio, System Control C.B.A.

Therefore no other modifications have been made to any other Parts of the Service Manual.

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are shaded on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

<TENTATIVE>
SERVO, AUDIO & SYSTEM CONTROL C.B.A. (VEPS0232A1)

IMPORTANT SAFETY NOTICE:
COMPONENTS IDENTIFIED BY THE SIGN  HAVE SPECIAL
CHARACTERISTICS IMPORTANT FOR SAFETY.
WHEN REPLACING ANY OF THESE COMPONENTS, USE ONLY THE
SPECIFIED PARTS.
